Shape memory Fe-Pd alloy contg. 25-35 at.% Pd is heat treated at 700-1,000
deg.C in N2+H2 30% or less reducing atmos., or N2, Ar, N2+Ar inert atmos.
USE/ADVANTAGE - Used for shape memory Fe-Pd alloy with thermoelastic
martensitic transformation. Cracking of the alloy is prevented, and shape
memory effects are not deteriorated.
